

Experiment No. 2: Setting up a Zoho Creator account and exploring the platform architecture and interface

1. Aim

To set up and explore the Zoho Creator platform by creating a **Corporate Asset Maintenance** application, designing forms, generating reports and dashboards, and understanding the **Develop, Deploy and Manage** sections of the platform.

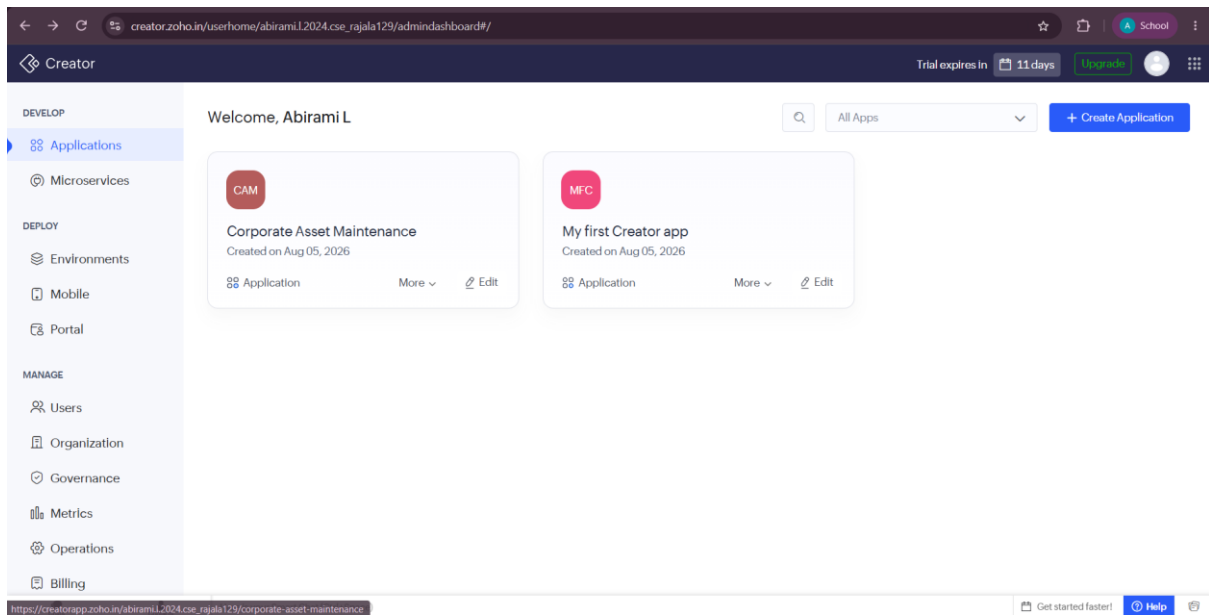

2. Setting up Zoho Creator

A Zoho Creator application named **Corporate Asset Maintenance** was created to manage company assets and their maintenance activities.

The application contains the following forms:

1. **Department** - Stores department details such as Department ID, Department Name, Department Head and Location.
2. **Asset Details** - Maintains information about company assets such as Asset ID, Asset Name, Category, Purchase Cost and Asset Status.
3. **Technician** - Stores technician details such as Technician ID, Name, Specialization, Experience and Availability.
4. **Maintenance Request** - Records maintenance requests raised for company assets.
5. **Maintenance Approvals** - Manages approval of maintenance requests based on the estimated cost.
6. **Repair Progress** - Tracks the repair activities performed by technicians.

Sample Application:
Corporate Asset Maintenance

A. Creating Form

A **Form** in Zoho Creator is used to collect and store information from users. In the Corporate Asset Maintenance application, forms are created for departments, assets, technicians, maintenance requests, approvals and repair progress.

For example, the **Technician Form** collects information such as Technician Name, Phone Number, Email, Specialization, Experience and Availability Status.

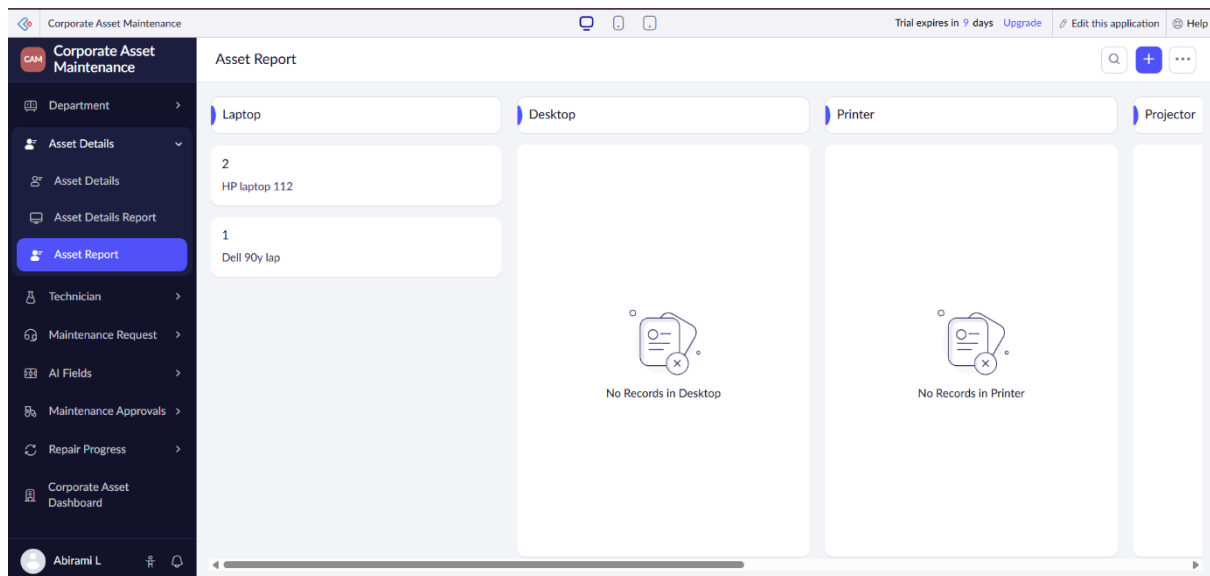

Explanation:

The form provides fields for entering technician information. When the user submits the form, the entered data is stored in the application's database and can be viewed through reports.

B. Creating Report

A **Report** is used to display and organize the data submitted through a form.

- I) The **Asset Report** displays where the asset category is laptop.(created by me)

- II) The **Asset Details Report** displays all the assets information.(default report)

The screenshot shows the 'Asset Details Report' page in the 'Corporate Asset Maintenance' application. The left sidebar contains a navigation menu with options: Department, Asset Details, Asset Details Report (highlighted), Asset Report, Technician, Maintenance Request, AI Fields, Maintenance Approvals, Repair Progress, and Corporate Asset Dashboard. The main content area is titled 'Asset Details Report' and displays a table of assets. The table has columns: Asset ID, Asset Name, Asset Category, Asset Serial Number, Purchase Date, Warranty Expiry Date, and Purchase Cost. The table shows 4 records. The bottom of the page shows 'Showing 4 of 4'.

Asset ID	Asset Name	Asset Category	Asset Serial Number	Purchase Date	Warranty Expiry Date	Purchase Cost
4	HP Projector	Projector	67543	08-Aug-2026	23-Jan-2027	₹ 45,000
3	Dell Desktop	Desktop	19876	04-Aug-2026	24-Apr-2027	₹ 55,000
2	HP laptop 112	Laptop	18104	27-Jul-2026	05-Sep-2026	₹ 80,000
1	Dell 90y lap	Laptop	56728	28-Jun-2026	18-Dec-2026	₹ 50,000

Explanation:

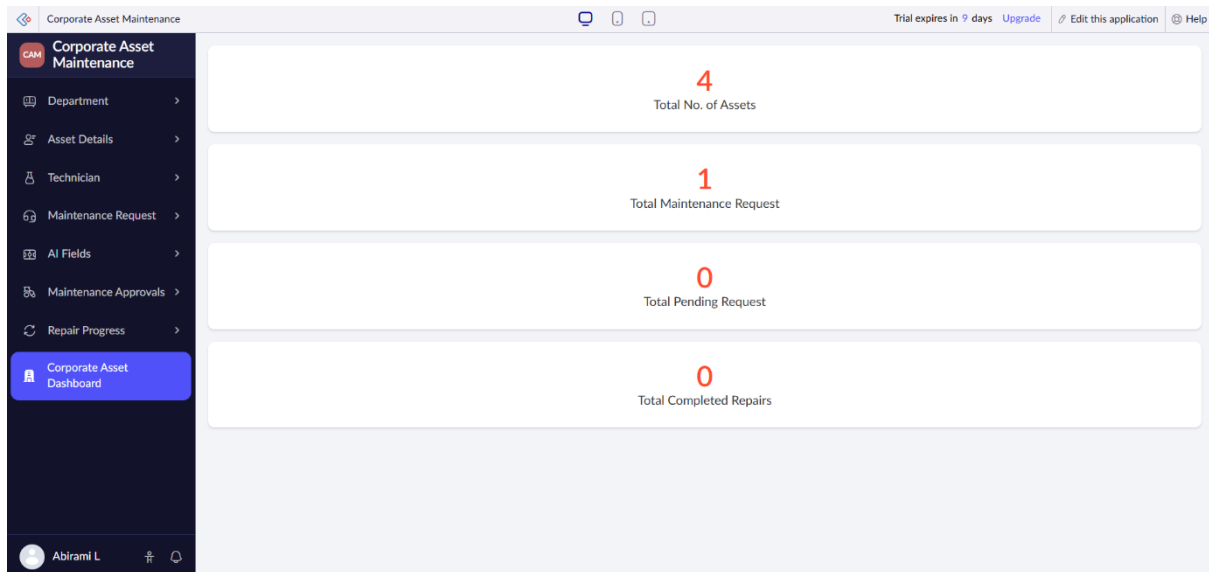

The report automatically displays the records entered through the Asset Details form. It helps users view, search, sort and manage asset information efficiently.

C. Creating Dashboard

A **Dashboard** provides a visual summary of important information using panels and charts.

The **Corporate Asset Dashboard** displays key information such as:

- Total Assets
- Total Maintenance Requests
- Pending Approvals
- Completed Repairs

Explanation:

The dashboard provides management with a quick overview of asset and maintenance activities. The values are automatically updated based on the data stored in the application.

3. Exploring the Platform Architecture and Interface:

A. Develop

1. The **Develop** section is used to create and customize applications in Zoho Creator.
2. It allows developers to create **forms, reports, pages, workflows and dashboards**.
3. It also supports **Deluge scripting** for implementing application logic and automation.

B. Deploy

1. The **Deploy** section is used to make the developed application available to end users.
2. Applications can be accessed through **web and mobile interfaces**.

3. User access and permissions can be configured based on different roles.

C. Manage

1. The **Manage** section is used to maintain and administer the application.
2. It provides options to manage **users, permissions, data, settings and integrations**.
3. Administrators can monitor the application and modify its configuration when required.

Result:

Thus, the **Corporate Asset Maintenance** application was successfully created and explored using Zoho Creator. Forms, reports and a dashboard were created to manage asset maintenance activities, and the **Develop, Deploy and Manage** sections of the Zoho Creator platform were studied.
